

This listing of claims will replace all prior versions, and listings, of claims in the application.

### LISTING OF CLAIMS

1. (currently amended) A device to remotely operate a hearing device,  
5 comprising:  
an input device integrated into a wristband or wristwatch and is configured  
to manually input control data, the input device comprising:  
a projection device configured to project one or more virtual input  
elements onto a surface of a human body that is a back of a  
10 hand; and  
a sensor device configured to register an operation of the virtual  
input elements.
2. (original) The device according to claim 1, wherein the one or more virtual  
15 input elements comprises at least one of images of buttons, rotary switches and  
sliding switches.
3. (original) The device according to claim 1, wherein the one or more virtual  
input elements comprise at least one of images of buttons of a program switch  
20 and a loudspeaker control.
4. (cancelled).

5. (original) The device according to claim 1, wherein the virtual input elements are scalable in size.

6. (original) The device according to claim 1, wherein the projection device is  
5 configured to be freely programmable with regard to the projected information.

7. (cancelled).

8. (original) The device according to claim 1, further comprising an activation  
10 device as a single physical control element of the device.

9. (original) The device according to claim 1, wherein the input device further  
comprises a wireless transmitter configured to transmit control signals based on  
information obtained from the sensor device to the hearing device.

15

10. (currently amended) A method to remotely operate a hearing device,  
comprising:

20

projecting, with a device integrated into a wristband or wristwatch, one or  
more virtual elements onto a surface of a human body which is a  
back of a hand;

manually inputting information via the one or more virtual elements,  
thereby registering an operation;

converting registered operation data to control signals; and

communicating the control signals to the hearing device.

11. (original) The method according to claim 10, further comprising registering the operation of the one or more virtual input elements quasi-continuously or discretely.

5

12. (original) The method according to claim 10, further comprising adjusting a program or a loudspeaker of the hearing device with the input device.

13. (cancelled).

10

14. (original) The method according to claim 10, further comprising individually adapting a size of the one or more virtual input elements.

15. (original) The method according to claim 10, further comprising freely  
15 programming the information to be projected.

16. (original) The method according to claim 10, further comprising invoking the method by operating a physical activator.

20 17-18. (cancelled).

19. (currently amended) The device according to claim 1 47, wherein all of the virtual input elements are configured to be projected with the projection device simultaneously onto the surface of the human body.

20. (currently amended) The method according to claim 10 ~~18~~, wherein all of the virtual input elements are simultaneously projected onto the surface of the human body.
